

Position Title

NOC Engineer

Job Purpose

To provide 24/7 continuous monitoring of network and system health, acting as the first point of contact for incident detection and ensuring timely communication to relevant technical teams.

Key Responsibilities

- **Active Monitoring:** Monitor real-time alerts via monitoring tool, and other dashboards to ensure 100% visibility of system status.
- **Incident Notification:** Immediately inform and escalate detected issues to the relevant technical teams (System, Network, or Dev) according to standard procedures.
- **Shift Operations:** Work within a 24/7 rotating shift schedule to ensure constant coverage of infrastructure health.
- **Collaboration:** Proactively communicate and collaborate with other teams to fulfill tasks and ensure incidents are tracked to resolution.
- **Basic Troubleshooting:** Perform initial verification of alerts to filter out "false positives" before escalating to senior engineers.
- **Reporting:** Document and log all incidents and communication activities during the shift for handover reports.

Job Requirements

- Diploma or Degree in Computer Science, Information Technology, or a related field is preferred.
- Fresh graduates are highly encouraged to apply.
- Basic knowledge of IT infrastructure, including servers, networking, internet, and computer hardware, will be considered an advantage.
- Strong understanding of operating systems and application support is required.
- Must be flexible and willing to work in a 24/7 shift rotation environment, including night shifts, weekends, and public holidays.
- Good communication and coordination skills with the ability to respond effectively during high-pressure situations.
- Strong sense of responsibility, discipline, and attention to operational monitoring and incident handling.
