

Position Title

Penetration Tester

Job Purpose

We are looking for an experienced **Penetration Tester** to conduct regular security assessments as part of our in-house security team. This role focuses on **hands-on testing, vulnerability validation, and collaboration with internal engineering teams** to improve the organization's security posture.

Key Responsibilities

- Plan, execute, and lead penetration tests for web and mobile applications, networks, cloud, and infrastructure
- Identify, exploit, and validate security vulnerabilities using manual and automated techniques
- Produce high-quality reports with risk ratings, business impact, and remediation guidance
- Collaborate with engineering and security teams during remediation
- Mentor junior penetration testers and review their findings
- Contribute to tool development, automation, and testing methodologies
- Stay current with new attack techniques, tools, and threat intelligence

Job Requirements

- Degree in Cybersecurity, Information Security, Computer Science, or a related field.
- Relevant Industry certifications (such as CEH, OSCP, eCPPT , etc) are a plus
- Scripting or programming experience (Python, PowerShell, Bash)
- Experience with Red Team or adversary simulation engagements
- Strong knowledge of network, application, and system security
- Deep understanding of OWASP Top 10, CWE, CVSS, and MITRE ATT&CK

- Hands-on experience with tools such as Burp Suite Pro, Nmap, Metasploit, Nessus, or similar
- Proficiency in Linux and Windows internals
- Ability to conduct manual exploitation beyond automated scans
- Excellent technical writing and communication skills
