

Position Title

UAT Analyst (Assistant Supervisor)

Job Purpose

Key Responsibilities

- Working with cross-disciplinary teams including product, design, and technology and service delivery teams with a focus on the digital line of mobile wallet platforms.
- Assisting in the planning, creation and execution of manual tests cases, test scenarios for product/service releases, verify test cases created by other team members
- Developing and maintaining key UAT documentation (e.g. user stories, test cases, user manual)
- Reporting test project status, tracking defect, retesting fixes and doing risk assessments
- Building relationships with product owners to understand product release scope and advise/influence on usability concerns
- Ensuring products meet functional and non-functional requirements, and that they perform in a way that is both technically and functionally sound from end to end
- Assisting with production validation following release deployments

Job Requirements

- Bachelor's Degree from a recognized college or university preferably in Computer Science and Information Technology
- More than 3 years' experience in a Quality Assurance or User Acceptance Testing role of mobile applications' usability
- Hands-on knowledge of Software Development Life Cycle principles and Quality Assurance methodologies/best practices
- Experience in the design of detailed functional test plans
- Experience in creation and execution of test scripts
- Experience working in an Agile development environment
